L1 Band Antenna

ET.patch™

Hemispherical Coverage

TRL 9

Mass: 43g

Features

- **Enhanced bandwidth through a slotted patch (~50MHz) to withstand manufacturing deviations, thermal cycling, and degradation over its lifespan**

Classic design @ $\epsilon_r=2.20$ covers the L1 range of 24MHz only marginally

- **A high Multipath Ratio reduces interference from the backplane and nearby objects**

Surface currents in ceramic-based small patches significantly distort performance under operating conditions

- **Reinforced microstrip-to-connector transition construction to prevent cracking or detachment during the launching**

A sandwich structure is used to reduce joint and solder area stress

Benefits

- **Designed for assembly, automation suitability, and optimal cost-effectiveness for high production batches**

Low profile suitable for high-reliability GPS-L1 service in satellite constellations or critical missions

- **Low-loss by Teflon-based substrate**

RT/DUROID 5880 has extensive testing and proven flight heritage by NASA

- **There is no floating potential and consistent thermal conductivity to the joint**

Direct thermal and electrostatic discharge path from the exposed patch to the interface joint surface through internal metallic vias

- **Optional: Flange adapter for Hat**
